Industrial talk

From BYK additives

Mahshid Niknahad, Ph.D.

Abstract: Additives for Coatings

This lecture will explore the critical role of additives in coating formulations, focusing on key types such as wetting & dispersing additives, rheology modifiers, surface additives, defoamers, and waxes.

We'll examine how these additives enhance properties like color uniformity, flow, and sag resistance or preventing defects such as bubbles and pinholes. We'll discuss how additives introduce texture and matting effects to surface coatings, optimizing overall performance.

Attendees will also learn about the evaluation methods used to ensure these additives meet high industry standards.

Lunch will be provided after seminar
